

eighty-two MAGNOLIA AESTHETICS & WELLNESS

Spider Vein Treatment

Post Care

- Cold compresses or chilled gel packs may be applied the day of procedure.
- Hydrocortisone topical can be used as needed to relieve any itching. OTC anti-histamines like Zyrtec, Claritin or Benadryl are also options to ease any itching
- Avoid strenuous activity for a minimum of 3 days post treatment.
- Avoid heat for 3 days (e.g. saunas, steam rooms, or extremely hot showers)
- Avoid sun exposure to avoid hypo- or hyper- pigmentation.
- Avoid scratching or picking the treated areas.
- The recommended time between treatments is 4-6 weeks or longer.

Possible Reactions

- Immediately after the treatment there may be erythema (redness) and edema (swelling) at the treatment site. This is normal and can last up to 2 weeks. The treatment area may feel tender initially but will subside.
- If a blister or crusting develops, treat as a wound. Keep clean, hydrated and protected.
- Results can appear to look worse before they get better.
